BW-5000-SF Swing Corner Feeder

View from outside stall,
feeder open.

The Equus Black Welded BW-5000-SF Swing Corner Feeder offers a very heavy duty answer for the equine owner. Every steel component receives a special six-stage prewash to insure complete paint adhesion even in welded areas. Then a powder coat polyester paint is applied to provide a long lasting beautiful finish. The large welded outer frame fits standard dimensional lumber constructed stalls. The two-sided welded right angle swing feeder door fits into the outer frame with a continuous solid rod hinge and is made to accept a standard 2' x 4' x 3/4" plywood core (supplied by others) in each half. This two-sided door closes off the stall completely when the swing feeder is open and closed. The plywood core can be painted or stained to match the remaining stall wood.

A large welded 5/8" solid rod hay basket is attached to the two-sided angle door providing additional strength to the door as well as a lot of room for hay. Steel hardware is placed below the hay basket to hold an optional (Model BW-5001-FP) plastic feed pan. A simple yet strong flip latch is added to hold the swing feeder in the normal closed position. The horse cannot get to the latch to open the door.

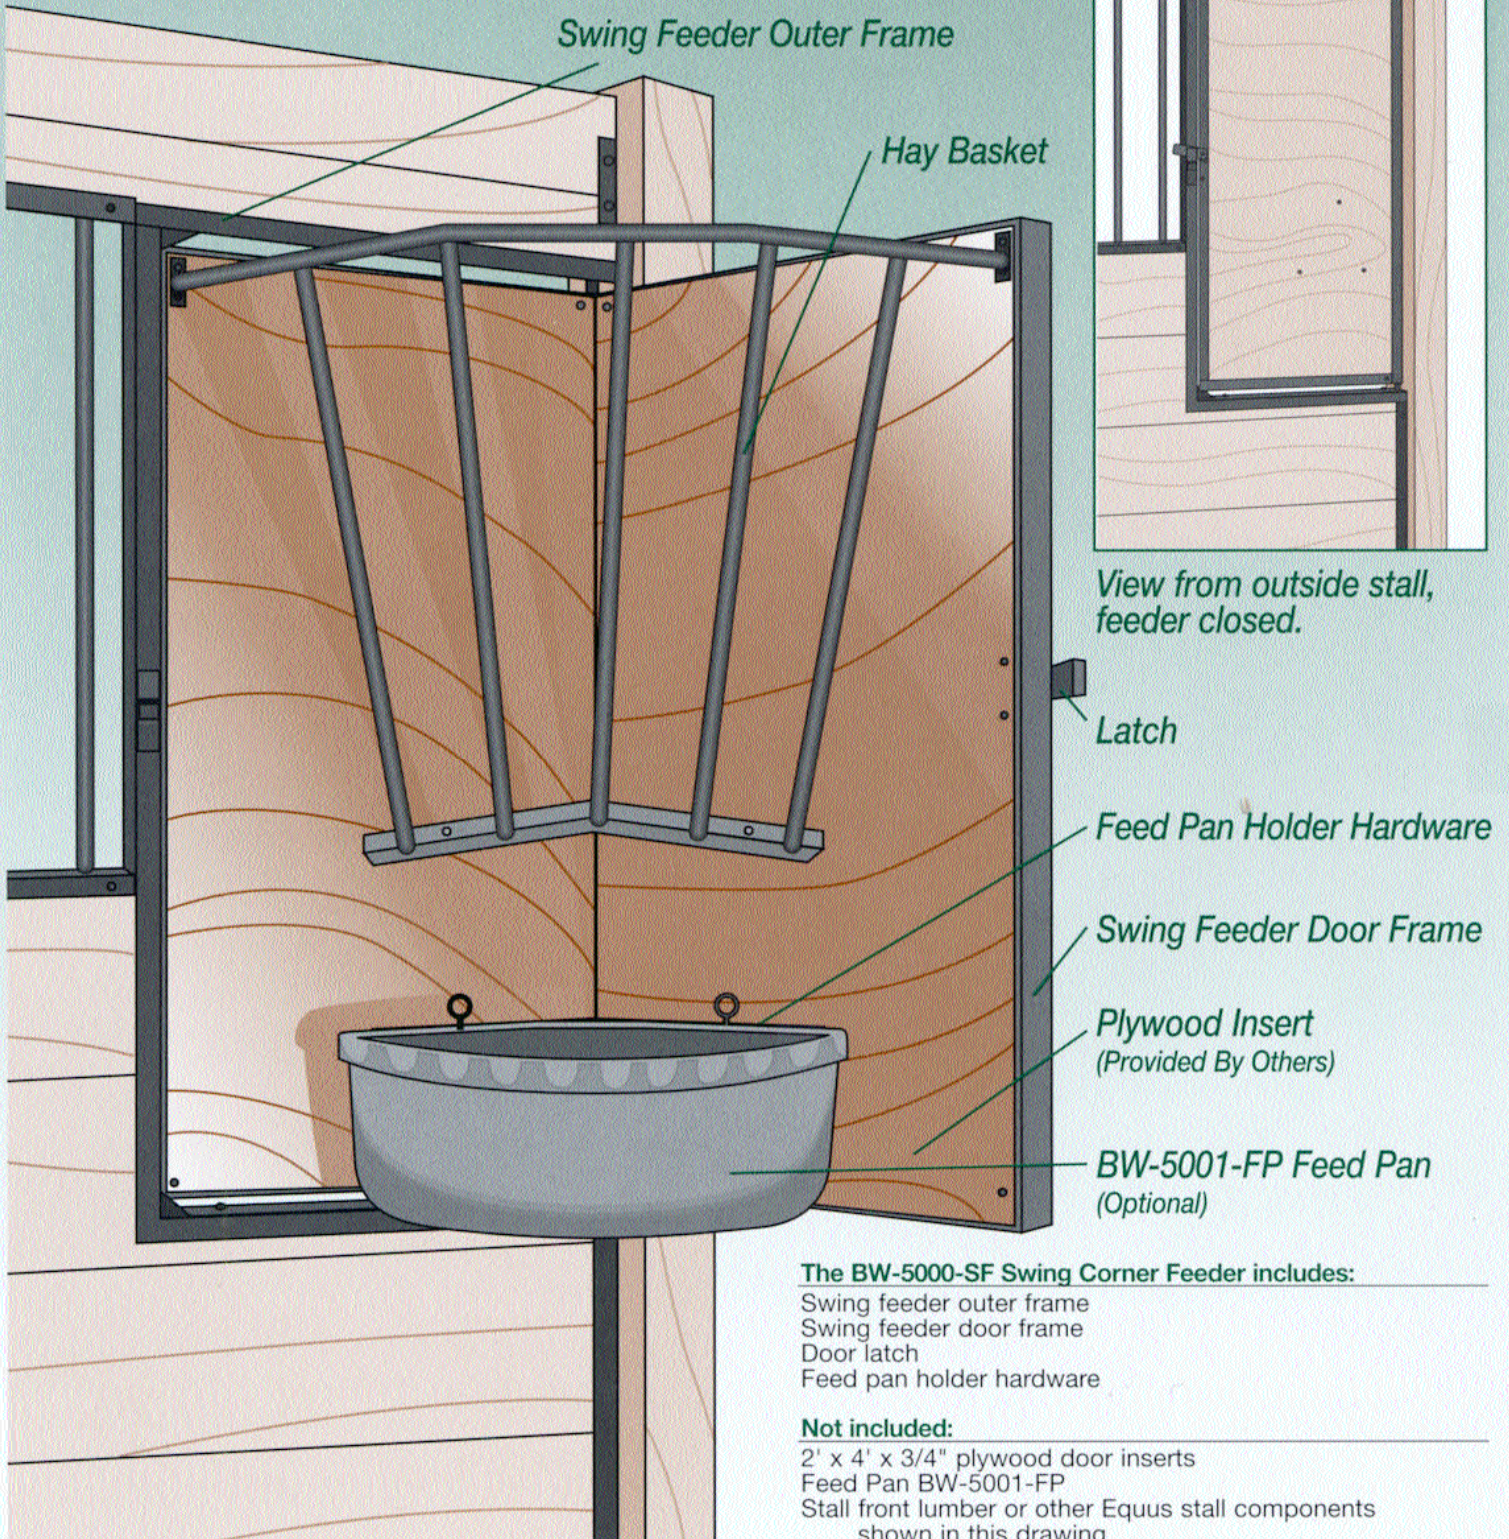

This swing feeder can be installed to swing to the right or left and complements the Black Welded Equus line of stalls and may be used with the galvanized stall system if desired. It is supplied with all installation hardware.
