

EQUUS

BLACK WELDED SYSTEM

Top of the line stall system – welded heavy duty grill – superior long life paint.

All Stall Front and Stall Wall packaged kits using the black welded grill are available with standard 4" on center spacing.

Package BW-4650

Stall Front with Grill and Slide Door*

This package provides a fully gridded front including slide door. This gives the stall the greatest visibility and ventilation. The horse is completely in view and can be easily touched. Welded grills provide strength to hold and protect. Designed around standard 2" x 10" lumber allowing easy assembly without ripping any board, the stall can be built with any size or quality dry lumber to provide the appearance you desire. Slide Door, Grills, 48" End Channels, Header Channels, and the 48" Wall Brace are all supplied with fasteners.

Package BW-4550

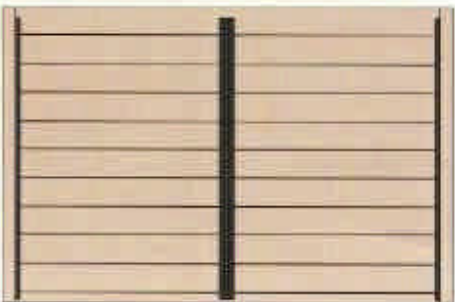

Stall Front with Grill in Slide Door only*

This package provides more security for the more lively horse by placing the grill in the door only. The front wall is completely boarded to provide greater protection to horses on each side of the stall. Designed around standard 2" x 10" lumber allowing easy assembly without ripping any board, the stall can be built with any size or quality dry lumber to provide the appearance you desire. Although the nongrilled front will reduce ventilation, boards may be spaced to allow adequate air movement. Slide Door, standard 96" End Channels and Wall Braces are all supplied with fasteners.

Package BW-4600 Stall Wall with Grill

This package provides a fully gridded wall providing the greatest visibility and ventilation. The horse is completely in view and can be easily touched. Welded grills provide strength to hold and protect. Designed around standard 2" x 10" lumber allowing easy assembly without ripping any board, the stall can be built with any size or quality dry lumber to provide the appearance you desire. Grills, 48" End Channels, Header Channels, and 48" Wall Brace are supplied with fasteners.

Package BW-4500 Stall Wall

This package provides a fully secure, protective wall with no grills. This offers full separation between horses. Designed around standard 2" x 10" lumber allowing easy assembly without ripping any board, the stall can be built with any size or quality dry lumber to provide the appearance you desire. Although a permanent wall, by assembling with screw fasteners, the wall can be easily removed to enlarge a stall as necessary. When needed, the wall is easily rebuilt. 96" End Channels and 96" Wall Brace are supplied with fasteners.

Note: All assembly and installation holes are prepunched in the Equus Kit System eliminating drilling during installation.

*Shown with optional sliding door track and hardware – order separately
